

INSPECTORS REPORT

Operator: CNX Gas Company LLC
API Number: MC34A 51-01199

Findings:

My inspection today finds this well to be non-producing, with no
production facilities or wellhead arrangement other than a swedge with a
ball valve to allow bleed off. The area around the well is grass covered
and shows no recent activity. No API number is attached to the well. I find
no evidence of any records that the well was drilled to target depth.

Does this inspection identify any dust issues? Yes No. **If Yes, explain.**
