Cow Run Sand (Dunkard)	861	886
Slate	886	905
Salt? Sand	905	947
Slate, black	947	1020
Salt? Sand	1020	1038
Break	1038	1095
Sand	1095	1115
Slate, black	1115	1130
Salt? Sand	1130	1172
Limestone and slate	1172	1451
<p>We should have another body of "Salt Sand" here to be regular with other wells of about a thickness of 60 feet, but found nothing but shells and lime. There was about 125 feet of lime, and found the "Big Injun" Sand 31 feet lower, there being an unusual break of 31 feet from the lime to the top of the "Big Injun" Sand, which we found at 1451 feet.</p>		
Big Injun (Salt) Sand (salt water at 1518', more water at 1575', streak of dark sand five feet thick at 1685', sand white and hard, except where water was found	1451	1774
Limestone, hard, gray, Big Lime (Limestone very hard, and drilled very slow, did not average over 5 feet per day. 1,600' salt water in hole. Cased 5-3/16" in hard limestone at 1816')	1774	1835
Limestone, gritty, very white	1835	1860
Sand, clear, white (more water at 1870').		
Big Injun	1860	1905
Slate	1960	1972
Sand, white, Squaw	1972	2003
Shells and slate	2003	2345
Berea Sand, very black and mixed with slate, with a very hard cap on top, and a very hard shell in bottom; second bit showed a light coloring of oil in the bailer, very slight, but smelled very strong of fresh oil; a very slight showing of gas; both oil and gas disappeared by the time we finished;	2345	2358
