

W. H. Bickel No. 1 Well.

Lubbock District, Wood County, W. Va.

By W. H. Bickel, Route 4, Parkersburg, W. Va.

1.9 mi. S. W. of mouth of Little Kanawha River at Parkersburg, and 2.5 mi. S. E. of Lubbock

4.1 mi. S. of 31°40' and 2.5 mi. E. of 59°10' -30-Belleville Quadrangle

Elevation about 690 feet (from topographic map)

Completion reported to Dept. of Mines Sept. 20, 1933

Record on pp 503-504 of Deep-well Records Report, 1933

Deepened June-July 1938

No oil, gas, or water in Crickany

Depth, feet from	to	Thickness, feet	
---------------------	----	--------------------	--

Huntersville chert 101 feet.

4322	4377	55	No samples
4377	4395	0	Chert, gray, calcareous; and very cherty limestone; contains small dolomite crystals and a little fine detrital quartz (silt)
4395	4403	13	Limestone, gray, very cherty, dolomitic; light-gray except for 2 feet darker at top; contains a little secondary crystalline quartz, a little sphalerite (4399-4401), a little silt and glauconite (4397-4403)
4403	4410	7	Chert and very cherty limestone, gray, dolomitic, with a little silt
4410	4412	2	Sandstone, dark-gray, very fine, cherty, calcareous, pyritic; contains also sphalerite, dolomite and a very little glauconite
4412	4413	0	Chert, gray to light-brown, highly calcareous; abundant dolomitic rhombs and cubic pyrite crystals
4413	4423	8	Limestone, gray, very cherty; contains some dolomite and a little glauconite

Crickany sandstone 25+ feet

4423	4425	2	Sandstone, light-gray, moderately calcareous, medium-grained, fairly well rounded
4425	4443	23	Sandstone, white, slightly calcareous, very hard; seems to have mostly fine to very fine texture but a considerable proportion of the grains are broken by the drill, so some may be coarser
